

DCAC9K (CONFIGURING CISCO NEXUS 9000 SERIES SWITCHES IN ACI MODE) 2.0

Objetivo

The Configuring Cisco Nexus 9000 Series Switches in ACI Mode (DCAC9K) v3.0 course is designed for senior engineers and IT professionals who implement and manage Cisco Nexus 9000 Series Switches in Cisco Application Centric Infrastructure (Cisco ACI) mode. This course covers the key components of the Cisco ACI architecture, along with the knowledge and hands-on skills you need to configure, manage, and troubleshoot Cisco Nexus 9000 Series Switches in Cisco ACI mode and connect the Cisco ACI fabric to external networks and services. You will learn how to deploy Cisco ACI security, networking, virtualization, automation, and programmability features on the Cisco Nexus 9000 Series Switches and migrate to a policy-enforced data center. Upon completion of this course, you will be able to:

- Install the Cisco Nexus 9000 Series Switches in Cisco ACI mode
- Deploy the Cisco ACI fabric
- Configure the Cisco ACI controller (Application Policy Infrastructure Controller [APIC])
- Describe the Cisco Nexus 9000 Series Switch hardware
- Understand the differences between Cisco ACI code versions
- Configure Cisco ACI Layer 4 through Layer 7 service integration
- Integrate virtual and physical workloads in a multihypervisor fabric
- Deploy the security and management capabilities of the Cisco ACI network
- Connect Cisco ACI to outside networks
- Extend and interconnect the Cisco ACI fabric
- Migrate from a traditional data center to Cisco ACI with a common, policy-enforced approach
- Manage Cisco ACI
